

AIRCRAFT TIRE SERVICE BULLETIN

USE OF AIRCRAFT TIRES AND WHEELS IN OTHER THAN AIRCRAFT SERVICE

Aircraft tires and wheels are designed specifically for Aircraft Service where the service conditions involved are different from those on ground vehicles and usage is intermittent. Intermixing of aircraft tires and wheels with ground vehicle tires and wheels could lead to tire or wheel failure.

Before using aircraft tires in service other than that for which they were primarily designed, the tire and wheel manufacturers concerned must be consulted.

WARNING

The bead seat diameter of aircraft wheels are different from those of ground vehicles. If an attempt is made to mount a tire on a wheel other than one for which it was designed, the tire could break with explosive force and cause serious injury or death.
