

FAST FACTS ABOUT...

TIRE MANUFACTURING SUSTAINABILITY

Natural gas powers more than half of USTMA member facilities.

As a result, these facilities have lower greenhouse gas emissions compared to those in other manufacturing sectors.

USTMA Member Fuel Mix (2019)

Between 2010 and 2019, total tire-manufacturing related **emissions of CO₂ decreased by 15%.**

USTMA member companies supported this reduction by **implementing strategies and technologies that improved their overall energy efficiency.**

According to the U.S. EPA, the tire industry is **one of the lowest CO₂ emitters in manufacturing.**

This is especially prevalent when comparing the industry to other manufacturing sectors, like chemical, aluminum and cement.
